

PORTFOLIO

About

Architects and Associates (a&a) is a visionary architectural practice dedicated to shaping spaces that inspire, endure, and belong. With deep expertise in conceptual design, site and environmental analysis, and interior architecture, we bring over two decades of collective experience to redefining the built environment.

"We believe architecture is not just about buildings, but about crafting experiences that resonate with people and place."

Rooted in strong academic, our team has continuously pushed the boundaries of design. Our projects have earned multiple nominations for the prestigious Berger Award for Excellence in Architecture, while also being showcased in renowned exhibitions and featured in leading architectural publications.

"Every line we draw, every space we shape, is guided by the pursuit of harmony between function, form, and feeling."

We see architecture as a dialogue between vision and reality — a dialogue that transforms ideas into landmarks of design excellence

Completion : 2011

PROJECT

Background

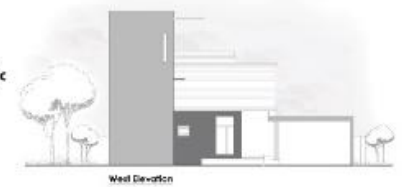

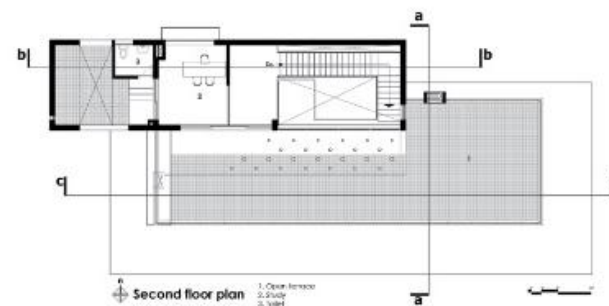

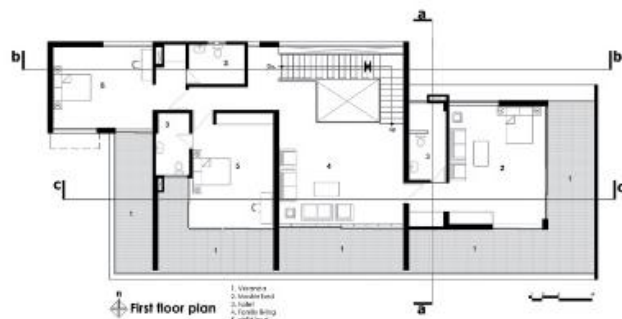

ABSTRACT:

Project:
Shamsul Haque Residence
Location: Cumilla
Client: Mr. Shamsul Haque
Area: 1338.29 Sq. M. (20 Katha)
Built-up area: 795.75 Sq. M.
Commencement: 2011
Completion: 2012

Off to the busy main road of Comilla a short tiny earthy road takes one to the residence of Mr. Shamsul Haque. This is the entrance of a huge madrasa complex with academic blocks, hostel for students, a mosque with the in-house accommodation capacity of approximate 2000 people, guest houses and play grounds. The enormous green field with different types of fruits and flower trees helps to soothe the mind with a garden-fresh sense. This residence is constructed between two big ponds with the distance of minimum 30 feet from each side, and causes reflections on the pond water.

OPEN
Yet
PRIVATE

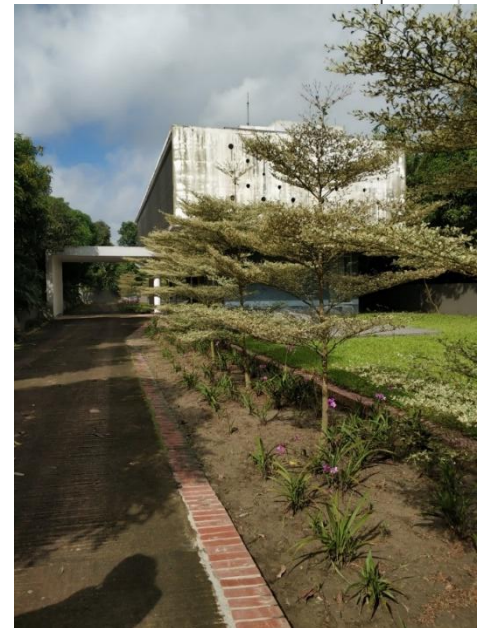

Concept

The client of this project is admittedly a religious person. Two major ideas were considered during the design decision stage. First were the client's requirements and second maintaining the privacy from outside world - yet experiencing wide vista from indoor areas. Verandahs are designed in such a way so that the users can feel like they are hovering over the pond in front. The basic concerns were proper functional solutions with natural lighting and ventilation.

Architecture

This modern residence is laid out artistically on a long and rectangular site of 1338 Sq. M. land. Entering the right side green lawn with shrubs brings the freshness before entering the residence. The paved road takes one towards the porch garage area. It has been designed to accommodate

different outdoor activities at ground and rooftop. The 3 story residence designed considering the privacy from outdoor and at the same time experiencing the wide open touch of nature from indoor areas. Each room has attached floating balcony with louver installed, which helps to experience the touch of nature with wide attitudes from inside and from outside. It works as a screen for the residence.

PURBACHAL INTERNATIONAL CONVENTION CENTER

The Purbachal International Convention Center is a large-scale architectural project located in the heart of the city. The building is designed to be a modern, multi-functional space that can accommodate a wide range of events, from large-scale conferences and exhibitions to smaller-scale meetings and social gatherings. The building's design is inspired by the local culture and the surrounding environment, featuring a curved roof and a facade made of traditional materials. The building is surrounded by a large, open plaza and a landscaped garden, providing a pleasant outdoor space for visitors. The project is a testament to the city's commitment to providing world-class facilities for its residents and visitors.

The building is designed to be a modern, multi-functional space that can accommodate a wide range of events, from large-scale conferences and exhibitions to smaller-scale meetings and social gatherings. The building's design is inspired by the local culture and the surrounding environment, featuring a curved roof and a facade made of traditional materials. The building is surrounded by a large, open plaza and a landscaped garden, providing a pleasant outdoor space for visitors. The project is a testament to the city's commitment to providing world-class facilities for its residents and visitors.

Purbachal International Convention Center

Introducing our sustainable one of a kind, public gathering space that links hundreds or perhaps thousands of kindred spirits. This is a community centre designed for the lively crowd to enjoy a variety of occasions.

Orientation:

The building is oriented along the North and South to obtain the maximum air flow, providing the best North-South cross ventilation.

Circulation:

People, including passengers in cars and pedestrians both enter the centre through north East to reach the central, grand entrance plaza. The place is simply luxulating with the spectacular landscape gardens and water fountains. Undoubtedly our focal point for this centre. Afterwards, as we walk there are two easily accessible paths. At the East there is a door leading to the Exhibition centre, at the West there is the Auditorium, allowing people to quickly move to their desired place. As they walk South, they will reach Riverside park. They also get the vertical circulations here, such as escalators, lifts and stairs. They will then reach the upper floors, coming to view the Meeting Halls, Dining and Restaurants and facilities as well as VIP Lounges. And if they move down from the central lobby, they'll meet the administration and parking spaces. One big advantage that we worked on, that is, meticulously solved, is the opportunity for easy access to Service Entry and Incase of any emergency, people can take a quick exit.

1) Site

2) We began our journey with just a mere rectangle.

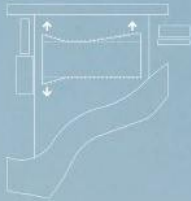

3) Then we added louvers all around the rectangle, surrounding the outer sides.

4) On the third stage, we noticed how the surrounding uniform louver was not only looking mundane but also hampering on.

5) The sense of privacy between the people within the community centre and the outside. Instead, we added two walls by the two opposite sides.

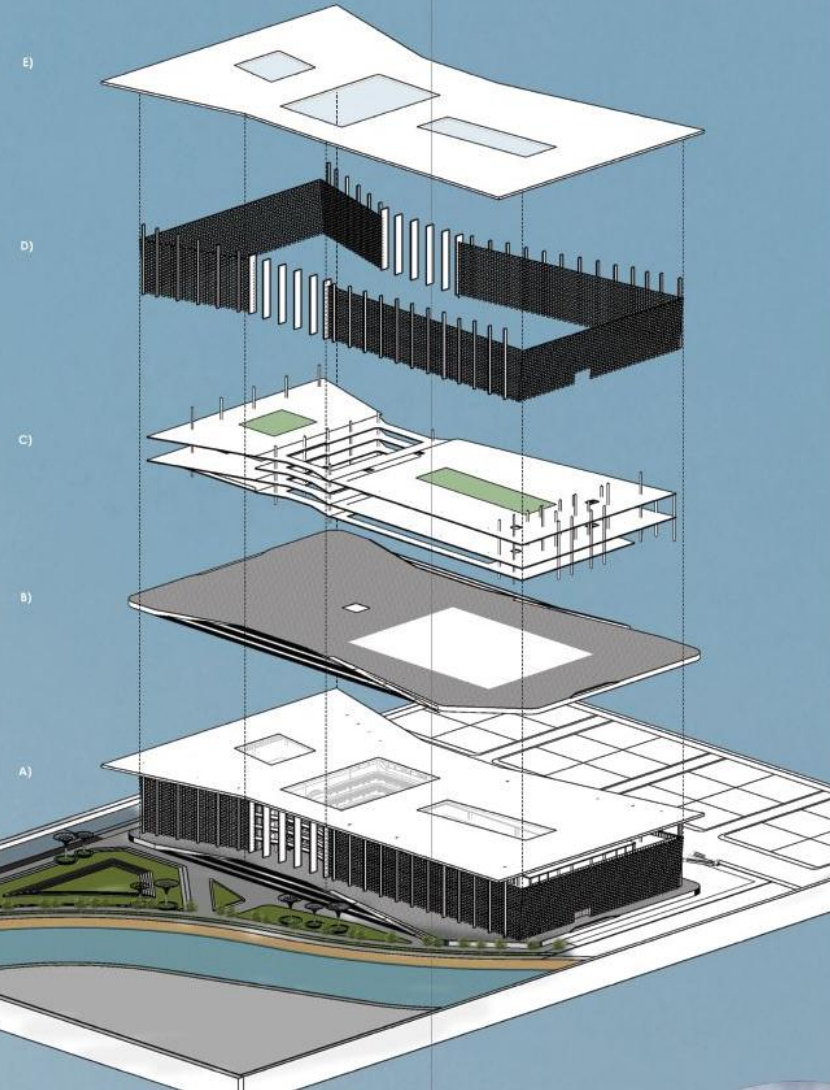

6) The Entry Line has been deliberately designed as a "sweeping line" to make the entrance feel inviting.

7) To highlight the roof, all the floors have been punched. The louvers are enlarged and gap has been increased.

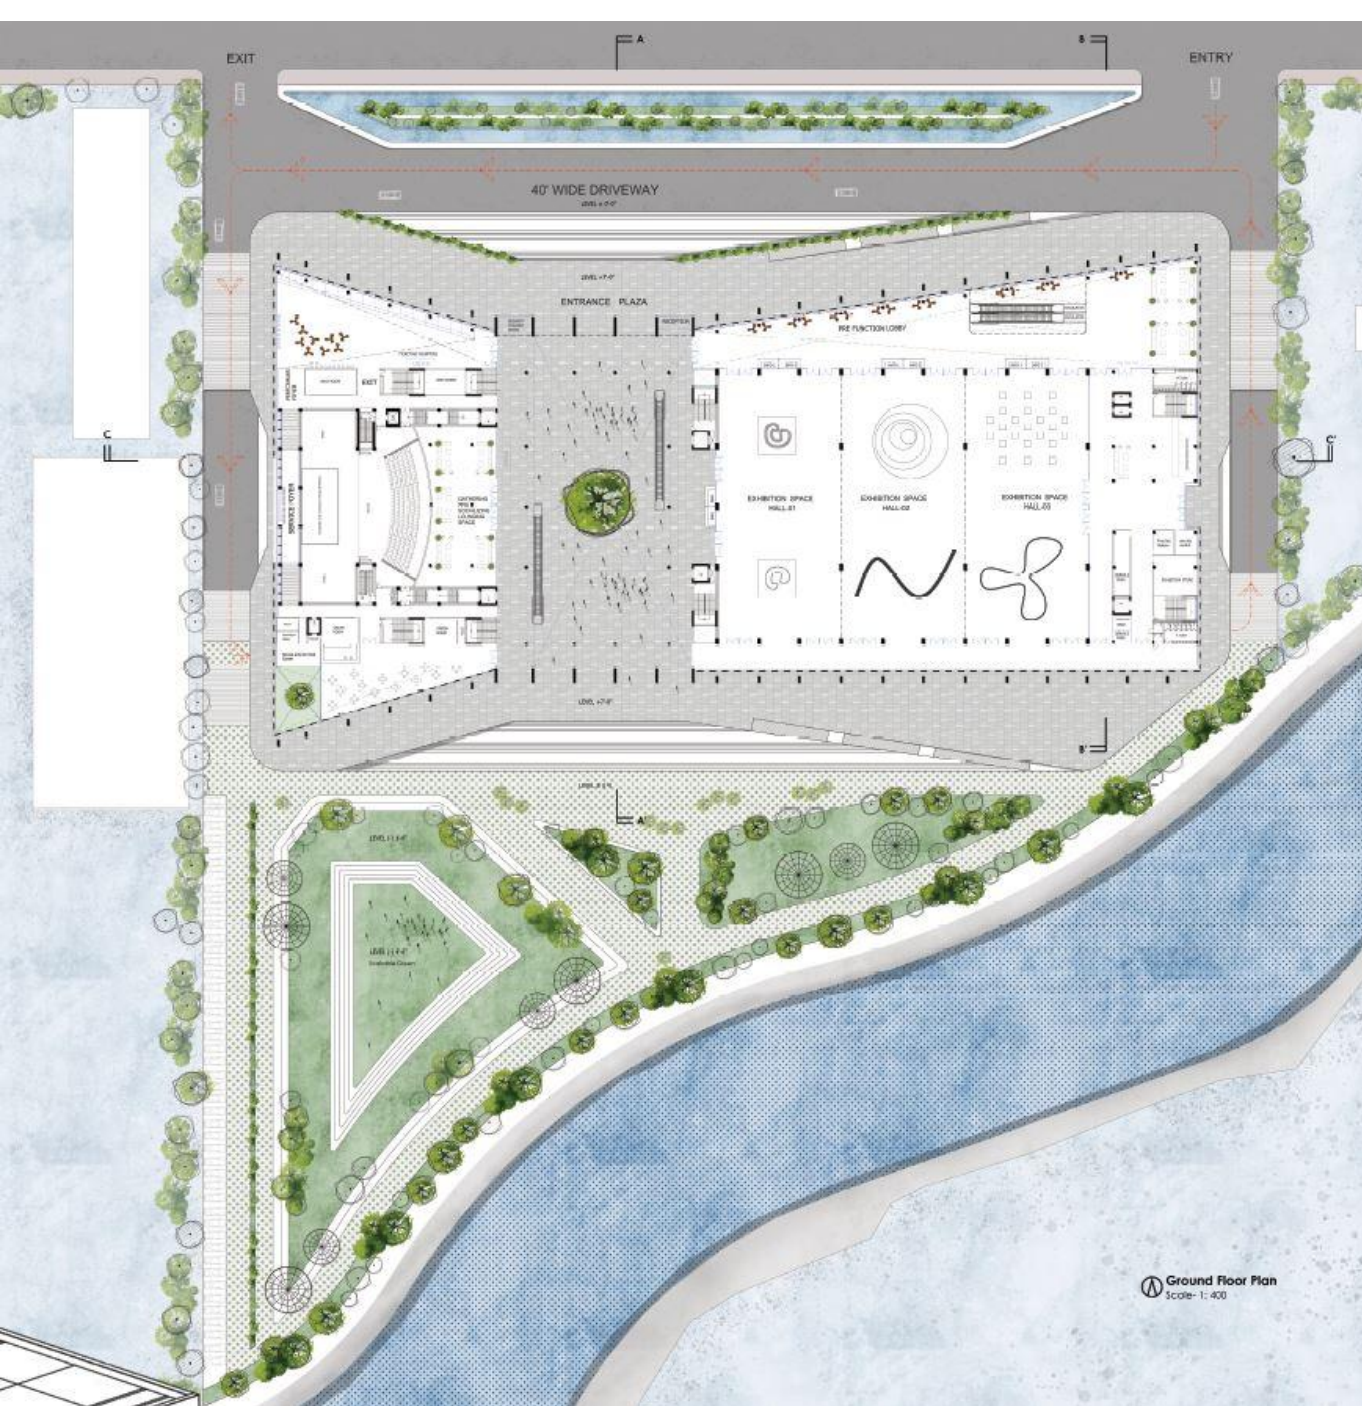

8) A straight double roof & This roof then has been bent.

INDOOR AND OUTDOOR SPACE QUALITY ENHANCEMENT: AFFORESTATION, INDOOR LANDSCAPE, PUNCHES AND VOIDS AS WELL AS RIVERSIDE PARKS.

These enhancement measures assures the commitment we have towards sustainability. Afforestations in our large open spaces not only provide a visually pleasing green environment, but young trees also help to sink our Carbon dioxide concentrations in the atmosphere, so as to help improve issues relating to global warming and climate change in recent times. The nature in the park can calm people down, and the Riverside scenery can be dazzling, with all the facilities. Overall, we believe that the simple good that we want to do will make this CONVENTION CENTRE an excellent one.
